

Test Report

Test Scenario 1: User Login.

In this test scenario, the user is logged in with the provided credentials.

Test Scenario 2: User management search

In this test scenario, a user is searched by clicking on the admin panel. The program prompts for a user input where in a username is provided. The program verifies if the username is provided is present in the database or not based on some UI elements.

Test Scenario 3: Add to new user.

In this test scenario, a new user is added to the database. By fetching UI elements to input proper details of the user, the program then asks for the information which is to be provided by the user. The constants however, are hard coded into the program (which were provided in the assignment document).

Test Scenario 4: API Testing

In this test scenario, a GET request test was supposed to be carried out on the endpoint provided in the assignment document. However, the URL provided is returning a 401 status code.

```
401
{'error': {'status': 401, 'message': 'Session expired'}}

Process finished with exit code 0
```
